1. Claims 1-10 and 17-22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 17 has been considered however the claims 11-14 and 23-25, the elected claims contain subject matter never before claimed in the case and since the withdrawn claims have not yet reached issue is deemed that the elected claims will be examined separately from the withdrawn claims, noting that said claims were comprised of claims of different scope, namely claims 1 and 2 for example. The rejection is made FINAL.

DETAILED ACTION

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 11-14 and 23-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hanley. IV et al '133, '027 alone or taken with the Cheng et al, Beizerman or Bodemann et al.

4. The primary references disclose insulating composition for sealing and providing an acoustic baffle comprising the method of injecting a heat expandable foamable composition comprising a blend of a ethylene-vinyl acetate copolymer and a styrene-butadiene copolymer, a blowing agent, catalyst and filler into two extensions which extend along an exterior of the member to be sealed. Applicants may argue that the

Art Unit: 1711

claimed protuberance is not shown by the references, however since there are no objective values attributed to the protuberance in the claims such limitation reads on the process of the references. Note the claimed pillars are referred to in col. 11 line 55 et.seq. of '133 and col. 7 line 60 et.seq. and col. 8 line 9 et.seq of '027. In any case the secondary references are all cited to show that it is well known to fill cavities where two sides filled and a portion of a protuberance extends into the filled cavities.

It would have been obvious to one skilled in the art to produce the claimed molded material by the method of the primary references.

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or no obviousness.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

8. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 1711

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

9. Claim 12 rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The expression "polymer comprising ethyl vinyl acetate" does not exist and appears to be new matter. Ethyl vinyl acetate does not polymerize since it does not have ethylenic unsaturation.
